

Ground Racking Systems

KM-F : Concrete Foundations

Adjustable and versatile, the KM-F Series is designed and engineered for flat based roofing and ground concrete installations. The KM-F series features an adjustable tilt enabling the optimization of sunlight exposure regardless of location. The KM-F series can be fixed to the ground via concrete blocks, concrete encased brackets or with the use of anchor bolts.

Features

- Mounting foundation is based on cast in brackets with pre-buried bolts for use with blocks, brackets, etc.
- Variable length column brackets enabling variable sunlight exposure angles
