

iSM500F

FLAT ROOF PV MOUNTING SYSTEM

DESCRIPTION

Installing solar panels on buildings of any kind is a logical development, as the roof offers free space and often a surface large enough for a profitable additional function. iSM500F solar mounting system for flat roofs was developed while taking roof and wind loads into account and, consequently, complies with the most stringent safety requirements. Our range for flat roofs is characterized by great efficiency and ease of assembly.

FEATURES

- Available in Aluminum or 304 stainless steel.
- Clamp system in portrait configuration.
- Easy assembly.
- Any tilt angle possible.
- Available in short or long lengths, depending on the location.
- Available as kits.
- Holds one row of panels.
- Reduced wind load due to low height.
- Ideal for small surfaces or where there are height limitations.
- Maximum ease of installation due to a limited number of components.
- Very durable construction.
- Manufactured according to International Quality and Environment Management System Standards ISO9001, ISO14001.
