

# iSM500P

## PITCHED ROOF MOUNTING SYSTEM

### DESCRIPTION

Ease of assembly and speed are important issues to be taken into account in the development of roof mounting systems, together with a further important issue for pitched roof systems – flexibility, since there are many types of pitched roofs and each type imposes individual requirements on a sturdy structure. Our range for pitched roofs is both well planned and complete. iSM500P system is applicable to many different types of roofs, like tiled roofs, steel roofs, corrugated roofs and standing seam roofs. Naturally, we supply the right, safe roof mount for every pitched roof.

### FEATURES

- Available in Aluminum or 304 stainless steel.
- Clamp system in portrait configuration.
- Easy assembly.
- Available in short or long lengths, depending on the location.
- Available as kits.
- Holds one row of panels.
- Maximum ease of installation due to a limited number of components.
- Very durable construction.
- Manufactured according to International Quality and Environment Management System Standards ISO9001, ISO14001.
