

BALLASTED LOW PROFILE SYSTEM

Our innovative racking system arrives pre-assembled and with all hardware pre-inserted. These racks require minimal time and effort to set up which means you spend less time on the roof.

HIGHER NET PROFITS

Our racking comes pre-assembled with all hardware pre-inserted at the factory, requiring significantly less time to install.

You can be off the roof in half the time which translates to higher net profits.

INTEGRATED WIRE MANAGEMENT

THRU-ITT™ Integrated Wire Management, which eliminates both the guess work of how best to run wires and the need to purchase extra parts to complete the wiring install.

CODE COMPLIANT

Our patented designs are code compliant in all areas, including local code requirements such as the recent New York RNCY 105-02 amendment, which requires the ballast to be fully contained.

CUSTOM DESIGNS

Solar Mounting Solutions fabricates systems at our factory in New York State. From ground to roof, we can provide code compliant racks to meet all of your project needs.

SMS Low Profile Ballasted System

Features

- Average 50% faster to install than any other rack
- Rack arrives direct from factory with **all** hardware pre-inserted
- Integrated wire management system (protected)
- Ballast protected from environment and contained per code
- Low profile design equals less ballast blocks
- Single tool installation
- EPDM rubber strips are pre-applied - shipped direct
- Available in Galvanized Steel/Aluminum/Painted (powder coated)
- Made in NYS USA
- Preferred rack by solar installers

Test/Certifications
Class A Fire Rating Tested
ETL/UL Listed Grounding Components
50 PSF Snow Load Rated
Wind Tunnel Simulation Tested
G90 Coated 20 Year Warranty / 25 Year Available

Calculations
3rd party structural PE stamped drawing and calculations
Material
Main Rack Component: G90 Galvanized Steel
Main Grounding Component: Stainless Steel
Hardware pre-install: Nickel Coated

All materials are manufactured, assembled and tested for quality, mechanical strength and electrical bonding at our New York facility.
