Working Model

Mode 1: Energy saving mode

Solar >> Battery >> Utility

Solar energy provides power to the loads as first priority. If solar energy is not enough to power all loads, battery will supply power to the loads at the same time.

Utility provides power to the loads only when battery voltage drops to either low-level warning voltage or the setting point in program.

Mode 2: Solar first

Solar >> Utility >> Battery

Solar energy provides power to the loads as first priority. If solar energy is not enough to power all loads, utility will power to the loads at the same time.

Battery provides power to the loads only when any one condition happens, that solar energy and utility is not available or solar energy is not enough and utility is not available.

Mode 3: Utility first

Utility >> Solar >> Battery

Utility will provide power to the loads as first priority. Solar and battery energy will provide power to the loads only when utility power is not available.
