

# ViaSolis PRIME 280-310 framed

Glass/Glass polycrystalline 72 cell module

**Glass/Glass modules – advanced choice for those who look for durability, safety, efficiency.**

## KEY FEATURES

### LAMINATION FOIL:

- Black
- White
- Transparent

## Why Glass/Glass technology?

Glass/Glass (G/G) modules are produced by laminating PV cells between two glasses, instead of standard glass and plastic.

In comparison with standard modules, the same glass material resistance and heat dispensing is more durable in fluctuating temperatures, hot and humid climate zones, ensuring a 50 year lifespan.

Unlike other G/G modules in the market, ViaSolis uses innovative edge-sealant technology to protect PV cells from humidity.

PV cells are manufactured in-house using advanced technologies ensuring elimination of potential induced degradation (100% PID free cells).

Both ViaSolis cells and modules are manufactured using green energy – geothermal, solar and hydro power.

**50+ year lifetime.** Edge-sealant protection assures superior atmospheric and humidity resistance.

**Back glass** instead of plastic assures durability and robust protection against UV, moisture, ammonia and salt corrosion.

**Higher heat dispensing.** Glass is better thermal conductor than plastic back-sheet in standard modules ensuring higher efficiency in hot climate.

**100% PID free cells.** Potential induced degradation is eliminated at cell level using PVB lamination foil.

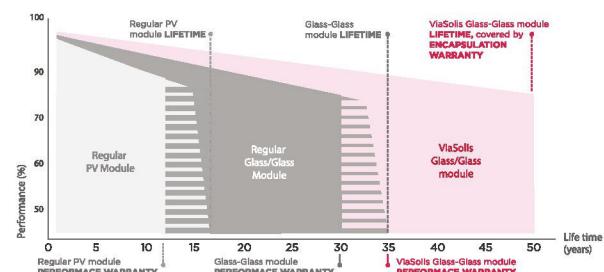

**Wider light spectrum absorbed.** PVB lamination foil utilise light spectrum starting from 280nm.
