AGM maintenance-free range designed for a wide range of applications with a 10 years design life

The FGL range of valve regulated batteries is designed to be maintenance-free. The special lead calcium tin alloy grid is designed for a 10 years design life and provides a short recharge time.

This sealed recombination battery has a wide range of applications and can be charged and discharged many times. The FGL range is designed

around AGM VRLA technology with the exterior casing made in ABS plastic, fully recyclable, non-spillable and maintenance-free. FGL range is non-hazardous for air/sea/rail/road transportation. Batteries can be installed in upright and horizontal planes. With a low self-discharge these battery are an ideal solution for periods when batteries may be stored.
