

STAND UP TO THE SUN

Standing Seam Rail-Free Kit

SunModo's Standing Seam Rail-Free System is a Mid Clamp and End Clamp assembly all rolled into one. It works for almost any standing seam roof profile.

This pre-assembled universal attachment is the only attachment needed; no spacers, no blocks and no sweat.

Standing Seam Rail-Free System Advantage

- ✓ Attaches to most standing seam panel profiles
- ✓ Universal Mid and End Clamps with 30-50mm Range
- ✓ Pre-assembled components for quick installation
- ✓ Integrated grounding tested and certified to UL2703 by Intertek

Key Features of Standing Seam Rail-Free System

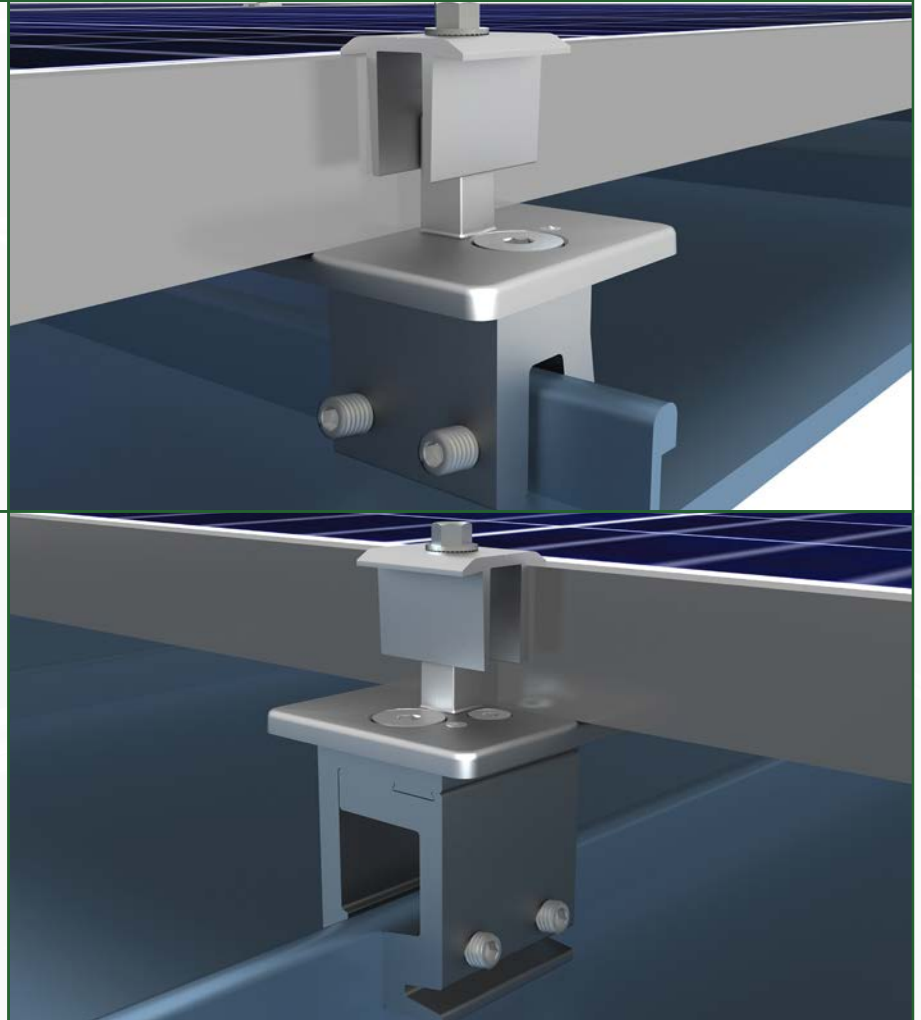

This unique claming kit can secure PV panels ranging in height from 30mm to 50mm. The oval end set screws prevent damage to the roof panel during installation. We offer two different standing seam rail-free clamps for your specific project need.

1" Standing Seam Rail-Free Kit

The set screws install at a 10 degree angle to speed attachment of the clamps to the roof. No more banging tools on the roof in order to access the set screws.

2" Standing Seam Rail-Free Kit

The 2-inch Standing Seam Clamp installs in situ at the desired seam attachment location. No more sliding the clamp up the roof line with this unique two-part assembly.

Technical Data

Application	Standing Seam Metal Roof
Material	High grade aluminum, 304 stainless steel hardware
Module orientation	Portrait and landscape
Structural Integrity	IBC and IRC compliant
Certificate	UL 2703 Listed by ETL
Warranty	25 Years
