

FOUR-SHAFT SHREDDERS - DRX, DRY

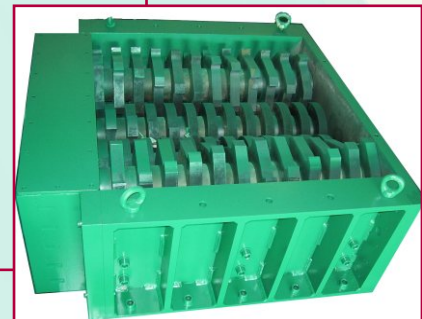

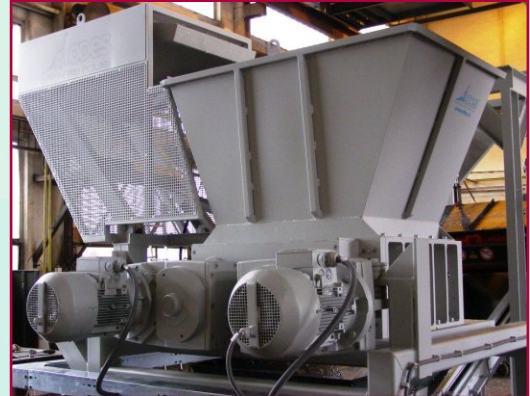

Type: DRX 870, DRY 1000, 1250

For shredding of waste of big volume to secure the requested output size, the four-shaft shredder can be applied with an advantage.

At present, the ODES s.r.o. is the only firm in Bohemia producing such equipment. It is extension to the production program with the retention of the shredder type shredder applied properties.

The shredder is suitable for shredding of oil filters, wood, rags, sanitary towels, plastics etc.

The drive is secured by a pair of gearboxes and a distributing frame. The automatic checks the overload of the shredder and carries out the possible reverse movement.

We deliver the shredder with a stand and a feeding hooper.

The shredder has four shredding shafts with segments, being simply exchangeable following dismantling of the terminal face. The top pair is feeding, the bottom pair is shredding.

Shredder is set for scrapping of:

Oil filters, wood, textile, plastic, hyg. needs etc.

Type	Working area [mm]	Segments widths [mm]	Input power [kW]	Weight [kg]
DRX 870	870 x 880	18, 36	2x15	3150
DRY 1000	1000 x 930	62	2x30	5800
DRY 1250	1250 x 930	62	2x30	6000
